

SAVAKROTH LEAV

PENETRATION TESTER

Seaton, Adelaide, SA • 0421 773 648 • savakroth17@gmail.com • [Linkedin](#) • [Portfolio](#)

A Cybersecurity Professional with a strong interest in ethical hacking, penetration testing, vulnerability analysis, and network security. Hard-working, energetic, passionate and technical-minded individual. Possess exceptional communication and collaboration skills with ability to resolve problems quickly. I aim to contribute to stopping cyber criminals and protecting digital assets.

EXPERIENCE

Officer IT Security (Pentest), Canadia Bank Cambodia

May 2026 - Aug 2026

- Conduct full-scope web, mobile, and network infrastructure penetration tests to identify and remediate vulnerabilities before production deployment with over 50+ high findings to date.
- Manage the vulnerability lifecycle for internal and external bank assets using Tenable Nessus, reducing the overall attack surface by 35%.
- Architect automated social engineering campaigns via GoPhish targeting 1,000+ employees, driving the click-through risk rate down from 18% to under 10% with security trainings.
- Work with external vendors on advanced tactical red team operations, testing physical and logical controls at bank headquarters to validate incident response playbooks.
- Deliver actionable risk reports and code-level remediation guidance to development teams based on OWASP Top 10 frameworks and CIS best practices.

Offensive Security Intern, Ministry of Post and Telecommunications

May 2025 - July 2025

- Performed penetration testing and vulnerability assessments on over 10+ digital assets including web servers, web applications, and network infrastructures of MPTC.
- Followed systematic approach and efficient framework such as cyber kill chain and penetration testing life-cycle to conduct black box testing and discovered over 30+ weaknesses and 10+ CVEs with tested attack vectors.
- Assisted in preparing technical reports outlining findings, threat levels, risks, and remediation recommendations for internal stakeholder

PROJECTS

Tenable Nessus Compliment Automation Toolkit

June 2026 - Aug 2026

- Engineered an automated security assessment web application integrating with the Tenable Nessus API to streamline vulnerability workflows and daily team operations.
- Built automated, production-ready report generation for executive sign-offs in different formats.
- Implemented a revalidation scanning engine alongside customizable baseline hardening and configuration checking to enhance scan accuracy.
- Successfully deployed the platform across the organization, accelerating vulnerability triage and cross-departmental remediation.

Phishing Security Assessment Web Tool

Aug 2025 - Dec 2025

- Designed and developed a phishing simulation tool to emulate real-world phishing campaigns for security awareness testing.
- Created and deployed 20+ simulated phishing emails (credential harvesting, malicious links, attachment-based lures) targeting test users.
- Tracked and analyzed user interactions, achieving open, click, and credential submission metrics to identify high-risk behaviors.

Network Intrusions Detection System Web Tool

Sep 2024 - Nov 2024

- Led a team of 5 members in developing a Python-based Network Intrusion Detection System (NIDS) designed for home networks and small businesses.
- Captured and analyzed real-time network traffic using scapy, detecting anomalies in TCP, UDP, and ICMP packets with an accuracy of 85-90%.
- Implemented machine learning-based intrusion detection, processing over 10,000+ data packets for threat classification.

EDUCATION

American University of Phnom Penh

- Bachelor of Science in Cyber Security | **GPA: 3.78**

Phnom Penh, Cambodia

May 2026

Torrens University Australia

- Masters of Cybersecurity (Advanced)

Adelaide, Australia

Expected Aug 2028

Other Certification Endeavor

- HackTheBox Certified Penetration Testing Specialist (HTB CPTS)

Expected Feb 2027

SKILLS

- Proficient in scripting language such as Bash, Python and Javascript for automation and exploiting
- Skilled in penetration testing tools such as Kali Linux, Nmap, Burp Suite, Metasploit, Bloodhound...
- Highly-trained on medium-to-large scale web application vulnerabilities and exploiting techniques
- Experienced in building and production deployment of applications with Docker, Kubernetes...
- Neat and detailed-oriented report writing ability during post exploitation
- Great networking and hardware knowledge for network infrastructure penetration testing
- Excellent task management. Ability to handle multiple projects simultaneously
- Ability to communicate and collaborate effectively with other team members and stakeholders

START UPS (TECHNICAL PROJECT LEAD)

Findtutor (<https://www.findtutor.app>)

April 2026 - Present

- Architected and shipped a three-surface product (Telegram Mini App, public web app, admin panel) on a shared backend server for efficiency and sustainability
- Built recurring-session booking flow with Bakong KHQR payment integration, in-wallet refunds, and 24-hour cancellation policy
- Delivered admin tooling for tutor verification, subject catalog, deals promotions, and Telegram-linked account management
- Technology Stack Used: FastAPI, PostgreSQL, Next.js, React, Vue, TypeScript, Docker...

CLEID (<https://test.cleid.findtutor.app>)

July 2026 - Present

- Touch-first POS and back office: dual-currency USD/KHR checkout, manual KHQR payments with manager verification, recipe-driven inventory and COGS, role-based permissions, English/Khmer UI.
- Built CLEID Agent, an insights assistant answering 20+ business questions (peak hours, menu engineering, period comparison, stock forecasting) computed deterministically from the shop's own sales, no model, every figure auditable.
- Advanced reporting: trading heatmaps, menu-engineering quadrants, profit concentration, and income/cash-flow/balance-sheet statements that explicitly mark what a till cannot know.

COMPETITION

1st Place Champions - Khmer Enterpsie Unipreneur Season 2 Cluster 1

July 2024

- Brainstormed our idea to work on home security which focuses on integrating hardware devices for entrance control, and security measures for a safer home all managed using your phones
- Worked together in a team of 5 to come up with a new startup business idea
- Interviewed and surveyed 100+ stakeholders including law enforcers, home owners, and more
- Pitched our idea in front of a big stage with professionals from different fields as judges
- Built an MVP together integrating both hardware and software into our buisness pitch
